...

Why Python

- Lack of type information in code
- Type checking is deferred to run time
- Argument passing is flexible

https://www.reddit.com/r/ProgrammerHumor/comments/a2g699/static_vs_dynamic/

Special Issues in Python

OneHotEncoder ,TypeError: __init__() got an unexpected keyword argument 'drop'

Asked 8 months ago Active 6 months ago Viewed 2k times

tensorflow:AttributeError: 'module' object has no attribute 'mul'

Asked 2 years, 11 months ago Active 3 days ago Viewed 60k times

Django error: render_to_response() got an unexpected keyword argument 'context_instance'

Asked 3 years, 6 months ago Active 1 year, 4 months ago Viewed 30k times

pandas DataFrame.rename unexpected keyword argument "axis" when using mapper

Asked 2 years, 1 month ago Active 2 years, 1 month ago Viewed 10k times

Following the [pandas docs](#) I tried the following (verbatim out of the docs):

```
df = pd.DataFrame({"A": [1, 2, 3], "B": [4, 5, 6]})
df.rename(str.lower, axis='columns')
```

yet I'm getting the error

What We Explored

How do **Python** framework APIs **evolve**?

What are the **compatibility issues**?

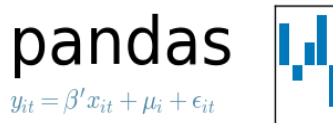

How do developers **fix** these issues?

Empirical Study

Python framework APIs evolution

Evolution Patterns

TABLE II
API EVOLUTION PATTERNS AND MATCHING RULES

Index	Element	Pattern	Frequency	Matching Rule	Change Type
1	Class (c)	Class Removal*	25,481 (2.3%)	$c \in C \wedge c \notin C'$	Breaking
2		Class Addition*	26,694 (2.4%)	$c \notin C \wedge c \in C'$	Non-Breaking
3	Method (m)	Method Removal*	309,759 (28.3%)	$m \in M \wedge m \notin M'$	Breaking
4		Method Addition*	319,618 (29.2%)	$m \notin M \wedge m \in M'$	Non-Breaking
5		Required Parameter Addition*	5,026 (0.5%)	$\exists p \notin P, p \in P' \wedge \neg \text{opt}(p)$	Breaking
6		Required Parameter Removal*	3,218 (0.3%)	$\exists p \in P, p \notin P' \wedge \neg \text{opt}(p)$	Breaking
7		Parameter Reordering*	840 (0.1%)	$\exists p_1, p_2 \in P \cap P', p_1 \prec p_2 \wedge p'_1 \succ p'_2$	Breaking
8		Optional Parameter Addition	12,996 (1.2%)	$\exists p \notin P, p \in P' \wedge \text{opt}(p)$	Breaking
9		Optional Parameter Removal	4,063 (0.4%)	$\exists p \in P, p \notin P' \wedge \text{opt}(p)$	Breaking
10		Parameter Default Value Addition	1,006 (0.1%)	$\exists p \in P \cap P', \neg \text{opt}(p) \wedge \text{opt}(p')$	Breaking
11		Parameter Default Value Removal	851 (0.1%)	$\exists p \in P \cap P', \text{opt}(p) \wedge \neg \text{opt}(p')$	Breaking
12		Parameter Default Value Change	11,362 (1.0%)	$\exists p \in P \cap P', \text{def}(p) \neq \text{def}(p')$	Breaking
13	Field (f)	Field Removal*	182,826 (16.7%)	$f \in F \wedge f \notin F'$	Breaking
14		Field Addition*	190,619 (17.4%)	$f \notin F \wedge f \in F'$	Non-Breaking

“ p ” and “ P ” denote a single parameter and a parameter list, respectively. “ c ” and “ C ” denote a single class and a set of classes in a release, respectively (“ m ” and “ M ”, “ f ” and “ F ” can be interpreted similarly). “*” means that this pattern also applies to Java. “'” denotes the new API version.

“ $\text{opt}(p)$ ” means that the parameter p is optional. “ $\text{def}(p)$ ” denotes the default value of p . “ $a \prec b$ ” / “ $a \succ b$ ” denotes parameter a is before/after b .

Evolution Patterns (cont.)

Compatibility Issues (API Existence)

Issue 133, pandastable

mgeorgiadis commented on May 3, 2019 + 😊 ...

Hello,

I'm running into issues running pandastable with the latest version of pandas (>0.24). When I try to import pandas table with

```
from pandastable import Table, TableModel
```

I get the

```
from pandas.tools import plotting
```

```
from pandastable import Table, TableModel
```

```
ModuleNotFoundError: No module named 'pandas.tools'
```

```
File "C:\Python\WPY64-3720\python-3.7.2.amd64\lib\site-packages\pandastable\core.py", line 42,
```

```
from .plotting import MPLBaseOptions, PlotViewer
```

```
File "C:\Python\WPY64-3720\python-3.7.2.amd64\lib\site-packages\pandastable\plotting.py", line
```

```
from pandas.tools import plotting
```

```
ModuleNotFoundError: No module named 'pandas.tools'
```

API Evolution Process

Issue 133, pandastable

```
# Pandas 0.20.0  
pandas.tools.plotting(...)  
  
pandas.
```

API Addition

```
# Pandas 0.24.0  
pandas.tools.plotting(...)  
pandas.plotting(...)
```

API Removal

API Relocation

Compatibility Issues (cont.)

Issue 133, pandastable

```
from pandas.tool import plotting
```

```
pandas.tool.plotting
```

ImportError (14.2%)

Compatibility Issues (Parameter Change)

Issue 12, colornet

```

TypeError: Expected int32, got list containing Tensors of type '_Message' instead.
```

API Evolution Process

Issue 12, colornet

TF 0.12

```
concat(concat_dim, values, name='concat')
```

Parameter Reordering

TF 1.0

```
concat(values, axis, name='concat')
```

Parameter Renaming

```
tf.concat(3, TypeError(31.4%) scale, grayscale])
```

Fixing Strategy

Altering argument passing (29/347)

```
tf.concat(...,3)
```

```
tf.concat( axis=..., values=
```

Positional Argument

Keyword Argument

parameter reordering would break the API calls with positional arguments

```
tf.nn.softmax(q_values, axis=0)
```

Keyword Argument

Positional Argument

parameter renaming would break the API calls with keyword arguments

Fixing Strategy

- Catching related exceptions (32/347)

Developers often catch such exceptions and fallback to alternative APIs

```
try:  
    from pandas import plotting  
except ImportError:  
    from pandas.tools import plotting
```

- Checking library versions or API existence (32/347)

Explicitly check the library versions or API existence before calling a target API

```
if(hasattr(pandas,“plotting”)):  
    from pandas import plotting  
else:  
    from pandas.tools import plotting
```

Empirical Findings (Overall)

14 Evolution patterns

3 Major exception types

```

new_class.default_manager = user_manager._copy_to_model(new_class)
AttributeError: 'PolymorphicManager' object has no attribute '_copy_to_model'

```

4 Fixing strategies

```

- from pandas import plotting

+ try:
+   from pandas import plotting
+ except ImportError:
+   from pandas.tools import plotting

- from pandas import plotting

+ if(hasattr(pandas,"plotting"))
+   from pandas import plotting
+ else
+   from pandas.tools import plotting

# Positional arguments -> keyword arguments
- grayscale = tf.concat([...], 0)
+ grayscale = tf.concat(axis=[...], values=0)

# Keyword arguments -> positional arguments
- softmax_out = tf.nn.softmax(g_values, axis=0)
+ softmax_out = tf.nn.softmax(g_values, 0)

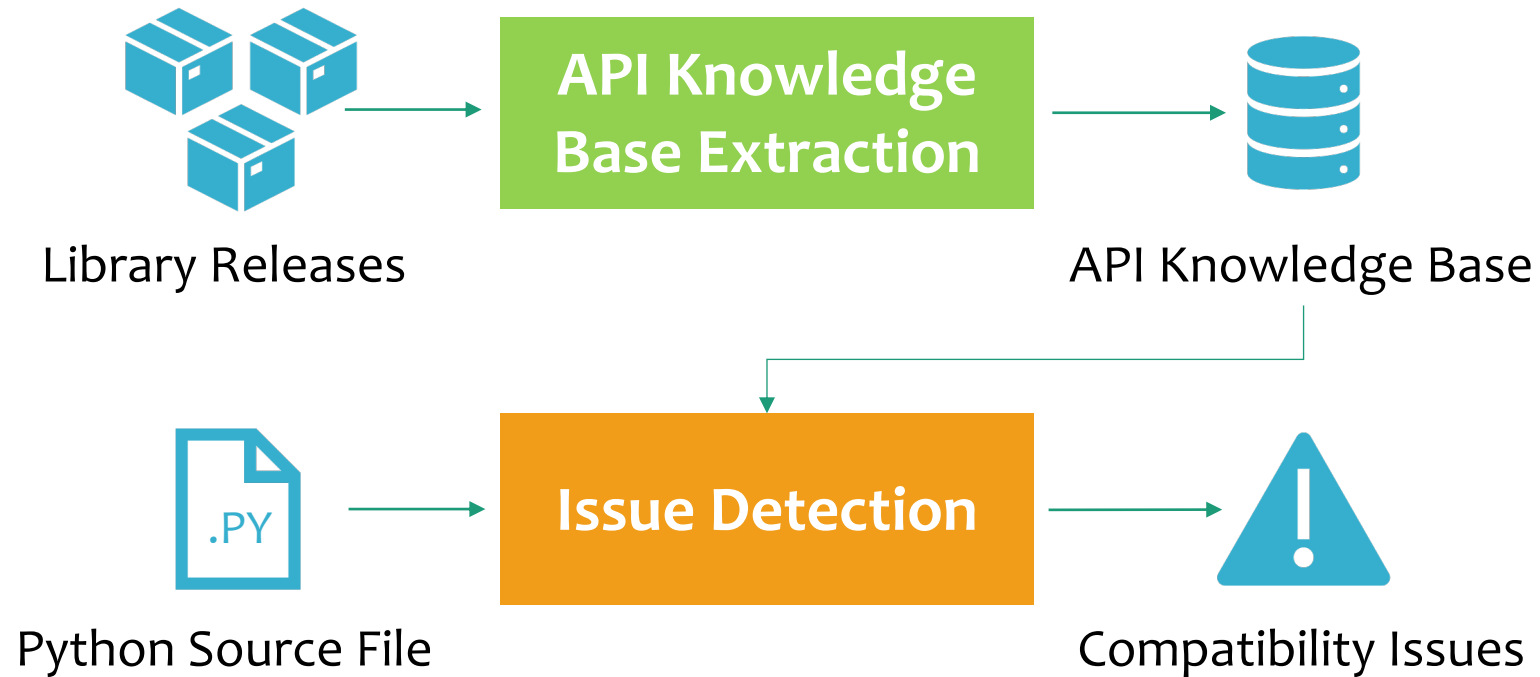

```
